LAPORAN

"Implementasi Trigger dan Store Procedure pada Kasus Kost Poetra Sultan"

Diajukan untuk memenuhi salah satu praktikum Mata Kuliah Basis Data yang di ampu oleh:

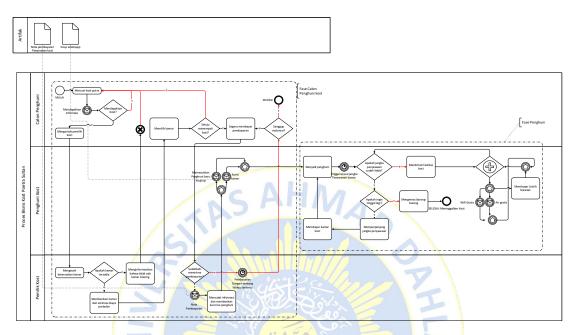

Dewi Soyusiawaty, S.T., M.T.

Disusun Oleh:

Mohammad Farid Hendianto 2200018401

PROGRAM STUDI INFORMATIKA UNIVERSITAS AHMAD DAHLAN FAKULTAS TEKNOLOGI INDUSTRI TAHUN 2023

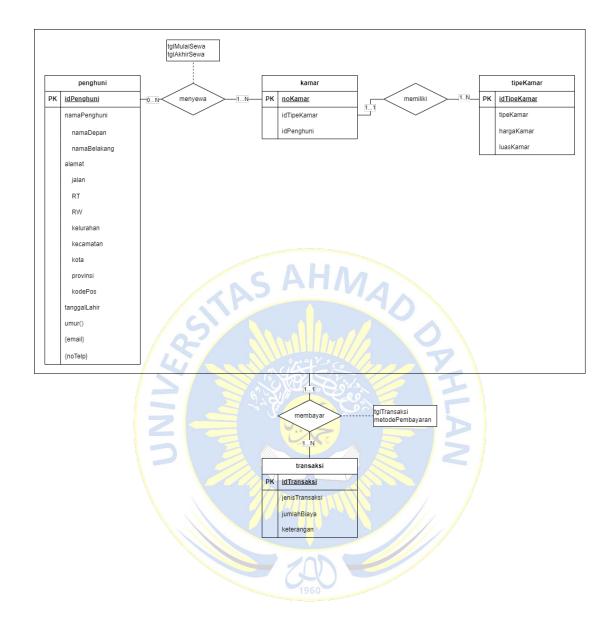

Proses bisnis pengelolaan rumah kost Poetra Sultan dimulai dengan penyebaran informasi mengenai ketersediaan unit kamar kepada calon penghuni. Calon penghuni akan melakukan pengecekan terhadap ketersediaan unit, dan menentukan tipe kamar yang diinginkan. Poetra Sultan menawarkan dua tipe kamar, yaitu standar tanpa kamar mandi dalam dan premium dengan fasilitas kamar mandi dalam.

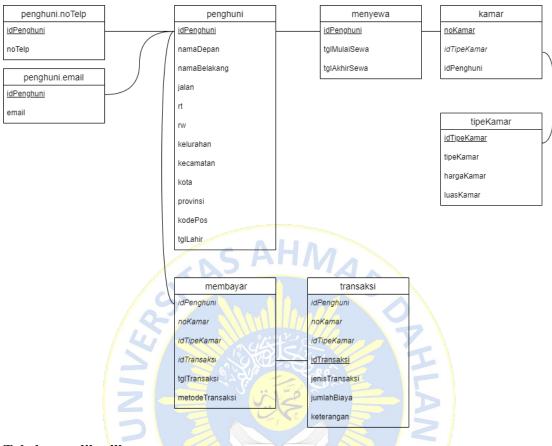

Setelah memutuskan untuk menyewa, calon penghuni akan menentukan durasi penyewaan minimal enam bulan atau satu semester akademik. Kemudian, mereka akan diperkenalkan dengan berbagai fasilitas yang disediakan oleh Poetra Sultan.

Selanjutnya, calon penghuni akan diminta untuk membuat akun di sistem manajemen rumah kost kami. Akun ini memungkinkan mereka untuk mengakses berbagai layanan seperti wifi, melihat durasi tinggal, melihat tagihan dan lainnya.

Penghuni diwajibkan membayar tagihan utilitas seperti listrik dan air tepat waktu. Jika terdapat ketidakpatuhan dalam pembayaran tagihan atau pelanggaran lainnya terhadap peraturan rumah kost, sanksi tertentu dapat diberikan hingga pemutusan kontrak penyewaan.

Proses bisnis ini berakhir ketika masa tinggal penghuni telah selesai dan proses check-out dilakukan.

```

Jika sudah ada databasenya bisa menghapus

```
DROP DATABASE kostpoetrasultan;
```

Output

```
MariaDB [(none)]> DROP DATABASE kostpoetrasultan;
Query OK, 8 rows affected (0.038 sec)
```

membuat database dan menggunakan database tersebut

```
CREATE DATABASE kostpoetrasultan;
USE kostpoetrasultan
```

```
MariaDB [(none)]> CREATE DATABASE kostpoetrasultan;
Query OK, 1 row affected (0.002 sec)

MariaDB [(none)]> USE kostpoetrasultan
Database changed
```

Melihat apakah database sudah terbuat atau belum

Menerapkan ke dalam MySQL, ada beberapa sedikit revisi apabila sudah dihapus maka akan dibuat NULL agar bisa digunakan lagi

```

A. Store Procedure

Perintah DESCRIBE dalam SQL digunakan untuk mendapatkan detail struktur tabel. Dalam hal ini, perintah DESCRIBE digunakan untuk mendapatkan detail struktur tabel 'kamar', 'membayar', 'menyewa', 'penghuni', 'penghuni_email', 'penghuni_notelp', 'tipekamar', dan 'transaksi'. Detail yang didapatkan meliputi nama kolom, tipe data, apakah kolom bisa bernilai NULL atau tidak, kunci (jika ada), nilai default (jika ada), dan ekstra (seperti AUTO_INCREMENT).

```
DESCRIBE kamar;
DESCRIBE membayar;
DESCRIBE menyewa;
DESCRIBE penghuni;
DESCRIBE penghuni_email;
DESCRIBE penghuni_notelp;
DESCRIBE tipekamar;
DESCRIBE transaksi;
```

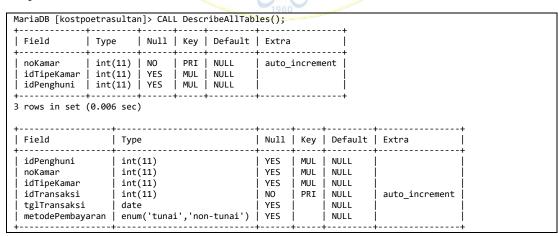

Melihat seluruh isi atribut pada masing masing, untuk lebih mudah daripada menggunakan describe <nama_tabel> dapat menggunakan fungsi berikut

```
DELIMITER $$
CREATE PROCEDURE DescribeAllTables()
BEGIN
 DECLARE done INT DEFAULT FALSE;
 DECLARE a CHAR(64);
 DECLARE cur CURSOR FOR SELECT table_name FROM
information_schema.tables WHERE table_schema = 'kostpoetrasultan';
 DECLARE CONTINUE HANDLER FOR NOT FOUND SET done = TRUE;
 OPEN cur;
  read_loop: LOOP
    FETCH cur INTO a;
    IF done THEN
      LEAVE read loop;
    END IF;
    SET @s = CONCAT('DESCRIBE
    PREPARE stmt FROM @s;
    EXECUTE stmt;
  END LOOP;
 CLOSE cur;
END;
$$
DELIMITER;
```

Untuk memanggilnya hanya

```
CALL DescribeAllTables();
```

Output:

Melihat isi data semua data pada masing-masing tabel dengan

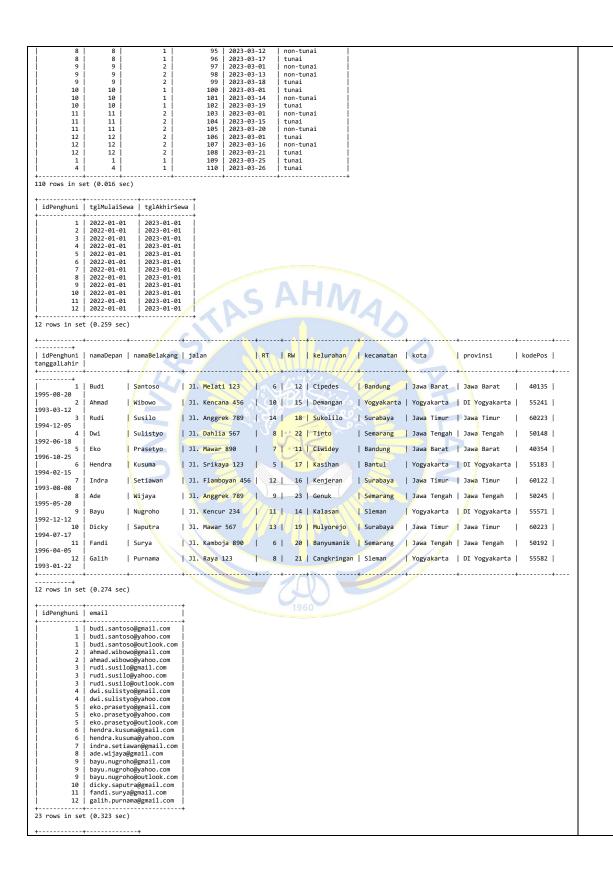

```
DELIMITER //
CREATE PROCEDURE ShowAllTables()
BEGIN
  DECLARE done INT DEFAULT 0;
  DECLARE tableName VARCHAR(255);
  DECLARE cur CURSOR FOR
    SELECT table_name
    FROM information_schema.tables
    WHERE table_schema = DATABASE();
  DECLARE CONTINUE HANDLER FOR NOT FOUND SET done = 1;
  OPEN cur;
  read_loop: LOOP
    FETCH cur INTO tableName;
    IF done THEN
      LEAVE read_loop;
    END IF;
    SET @s = CONCAT('SELECT * FROM ', tableName);
    PREPARE stmt FROM @s;
    EXECUTE stmt;
    DEALLOCATE PREPARE stmt;
  END LOOP;
  CLOSE cur;
END //
DELIMITER;
```

Untuk memanggilnya

CALL ShowAllTables();

Hasil output

Mengecek apakah kamarnya kosong atau tidak

Query OK, 0 rows affected (0.709 sec)

```
DELIMITER //
CREATE PROCEDURE CekStatusKamar(IN noKamarInput INT)
BEGIN
DECLARE idPenghuniDiKamar INT;

SELECT idPenghuni INTO idPenghuniDiKamar
FROM kamar
WHERE noKamar = noKamarInput;

IF idPenghuniDiKamar IS NOT NULL THEN
SELECT CONCAT('Kamar No', noKamarInput, ' sedang ditempati.') as status;
ELSE
SELECT CONCAT('Kamar No', noKamarInput, ' kosong.') as status;
END IF;
END //
DELIMITER;
```

Cara memanggilnya

CALL CekStatusKamar(<no kamar>);

```
Contoh output

MariaDB [kostpoetrasultan]> DELIMITER //
```

```
MariaDB [kostpoetrasultan]> DELIMITER //
MariaDB [kostpoetrasultan]> CREATE PROCEDURE CekStatusKamar(IN noKamarInput INT)
-> BEGIN
```

```
DECLARE idPenghuniDiKamar INT;
    ->
        SELECT idPenghuni INTO idPenghuniDiKamar
    ->
        FROM kamar
        WHERE noKamar = noKamarInput;
    ->
    -> IF idPenghuniDiKamar IS NOT NULL THEN
          SELECT CONCAT('Kamar No ', noKamarInput, ' sedang ditempati.') as
    ->
status;
   ->
          SELECT CONCAT('Kamar No ', noKamarInput, ' kosong.') as status;
    -> END IF;
   -> END //
Query OK, 0 rows affected (0.004 sec)
MariaDB [kostpoetrasultan]> DELIMITER ;
MariaDB [kostpoetrasultan]>
MariaDB [kostpoetrasultan]> CALL CekStatusKamar(1);
status
| Kamar No 1 sedang ditempati. |
1 row in set (0.001 sec)
Query OK, 1 row affected (0.003 sec)
```

Soft reset untuk menghapus data yang ada di masing-masing tabel di database

```
DELIMITER //
CREATE PROCEDURE TruncateAllTablesInDatabase()
BEGIN

DECLARE _done INT DEFAULT FALSE;
DECLARE _tableName VARCHAR(255);
DECLARE _cursor CURSOR FOR
    SELECT table_name
    FROM information_schema.tables
    WHERE table_schema = 'kostpoetrasultan';
DECLARE CONTINUE HANDLER FOR NOT FOUND SET _done = TRUE;

SET FOREIGN_KEY_CHECKS = 0; -- menonaktifkan cek kunci asing

OPEN _cursor;

read_loop: LOOP
    FETCH _cursor INTO _tableName;

IF _done THEN
```

```
LEAVE read_loop;
END IF;

SET @sql = CONCAT('TRUNCATE TABLE kostpoetrasultan.',
_tableName);
PREPARE stmt FROM @sql;
EXECUTE stmt;
DEALLOCATE PREPARE stmt;
END LOOP;

CLOSE _cursor;

SET FOREIGN_KEY_CHECKS = 1;
END //
DELIMITER;
```

Untuk memanggilnya

CALL TruncateAllTablesInDatabase();

Hasil output

```
MariaDB [kostpoetrasultan]> DELIMITER //
MariaDB [kostpoetrasultan]> CREATE PROCEDURE TruncateAllTablesInDatabase()
    -> BEGIN
    -> DECLARE _done INT DEFAULT FALSE;
    -> DECLARE _tableName VARCHAR(255);
    -> DECLARE _cursor CURSOR FOR
           SELECT table_name
    ->
           FROM information_schema.tables
    ->
           WHERE table_schema = 'kostpoetrasultan';
    ->
        DECLARE CONTINUE HANDLER FOR NOT FOUND SET _done = TRUE;
    ->
    ->
        SET FOREIGN_KEY_CHECKS = 0; -- menonaktifkan cek kunci asing
    ->
    ->
        OPEN _cursor;
    ->
    ->
        read loop: LOOP
    ->
          FETCH _cursor INTO _tableName;
    ->
    ->
           IF _done THEN
    ->
           LEAVE read_loop;
    ->
    ->
           END IF;
    ->
           SET @sql = CONCAT('TRUNCATE TABLE kostpoetrasultan.', _tableName);
    ->
           PREPARE stmt FROM @sql;
    ->
           EXECUTE stmt;
    ->
           DEALLOCATE PREPARE stmt;
    ->
        END LOOP;
    ->
    ->
        CLOSE _cursor;
    ->
        SET FOREIGN_KEY_CHECKS = 1;
    -> END //
```

```
Query OK, 0 rows affected (0.006 sec)

MariaDB [kostpoetrasultan]> DELIMITER;
MariaDB [kostpoetrasultan]> CALL TruncateAllTablesInDatabase();
Query OK, 0 rows affected (0.054 sec)

MariaDB [kostpoetrasultan]> select * from transaksi;
Empty set (0.000 sec)
```

Setelah kita cek, ternyata tabel transaksinya sudah kosong.

Mencoba membuat store procedure, input penghuni dengan prosedur.

```
DELIMITER $$

B. Trigger

Pencegahan, apabila kita Insert itu harus kamar yang kosong

```
DELIMITER //
CREATE TRIGGER check_availability
BEFORE INSERT ON kamar
FOR EACH ROW
BEGIN
   DECLARE roomOccupied INT;
   SELECT COUNT(*) INTO roomOccupied FROM kamar WHERE noKamar =
NEW.noKamar AND idPenghuni IS NOT NULL;
   IF roomOccupied > 0 THEN
        SIGNAL SQLSTATE '45000' SET MESSAGE_TEXT = 'Gagal input: Kamar sudah ditempati.';
   END IF;
END;
//
DELIMITER;
```

Output jika sudah ditempati, dengan custom error.

```
MariaDB [kostpoetrasultan]> INSERT INTO kamar(noKamar, idTipeKamar, idPenghuni) VALUES (1, 1, 1); ERROR 1644 (45000): Gagal input: Kamar sudah ditempati.
```

Membuat trigger akan berjalan setelah melakukan operasi INSERT pada tabel penghuni. Trigger akan otomatis membuat transaksi sewa kamar dengan harga kamar sesuai tipeKamar dari penghuni baru. Setelah itu, trigger juga akan membuat entri pada tabel membayar dengan metode pembayaran default sebagai 'tunai' dan tanggal transaksi adalah tanggal saat ini.

```
DELIMITER //
CREATE TRIGGER BiayaSewaKamarOtomatis
AFTER INSERT ON kamar
FOR EACH ROW
BEGIN
   DECLARE hargaKamar DECIMAL(10,2);
   DECLARE idTransaksi INT;

SELECT hargaKamar INTO hargaKamar FROM tipeKamar WHERE
idTipeKamar = NEW.idTipeKamar;
```

```
INSERT INTO transaksi(idPenghuni, noKamar, idTipeKamar,
jenisTransaksi, jumlahBiaya, keterangan)
  VALUES (NEW.idPenghuni, NEW.noKamar, NEW.idTipeKamar, 'sewa kamar', hargaKamar, 'Transaksi sewa kamar otomatis');

SET idTransaksi = LAST_INSERT_ID();

IF hargaKamar IS NULL THEN
  DELETE FROM transaksi WHERE idTransaksi = idTransaksi;
END IF;
END;
//
DELIMITER;
```

Output

```
